Maintenance of Facades in Public Infrastructures in Conditions of Low Rainfall

Published On: June 06, 2026 | Pages: 001 - 006

Author(s): Jorge Pablo Aguilar Zavaleta*

The maintenance of façades in public infrastructures located in low-rainfall regions represents a unique engineering and design challenge. Far from being beneficial, the scarcity of precipitation accelerates material degradation due to intense solar radiation, thermal fluctuations, and the persistent accumulation of pollution and dust particles, which are not natural
